

D3-K2 LipoSpray[®]

D3-K2 LipoSpray[®] is a synergistic blend of the prohormone vitamin D3, and the fat-soluble vitamin, K2, which work together to regulate calcium uptake and maintain the integrity of the skeletal and cardiovascular systems.* Vitamin D3 specifically manages the absorption of calcium through the production of three special proteins—calbindin, osteocalcin, and matrix GLA protein (MGP). Calbindin transports calcium within the cells and is dependent on the presence of D3 to function. Likewise, osteocalcin and MGP are both dependent on K2 and created by D3, illustrating the need for D3 and K2 to be nutritionally combined.* These two proteins direct calcium to the deficient areas and away from soft tissues and arteries. Osteocalcin binds calcium to the bone matrix within the skeletal system, ensuring the development and maintenance of strong bones and teeth.* Similarly, MGP protects from arterial calcification and reduces the potential for hardening of the arteries and heart disease.*

Synergistic Considerations

Adaptopath
Circulopath
Phyto Cal-Mag Plus
SpectraMin

The body requires sufficient D3 and K2 to sustain adequate calcium absorption and retard bone resorption. Due to the loss of calcium, resorption causes the bones to become soft, brittle, and easily fracturable. Ingesting the necessary amounts of these essential vitamins may help support normal bone health. While the body can acquire D3 and K2 through sunlight and diet respectively, approximately 50% of the population worldwide is vitamin D deficient.* Since receiving the adequate dosage is uncommon, supplementation with **D3-K2 LipoSpray** is an easy way to get the vitamins D3 and K2, which support normal bone and cardiovascular health.*

Ingredients

Vitamin D3

The neuroregulatory steroidal hormone vitamin, D3, is the most absorbable form of vitamin D, and it assists with genetic regulation and calcium absorption.

Vitamin K2

Found in the gut, K2 must enter the vessel walls and tissues to activate the K2-dependent proteins created by D3 to regulate calcium use.

Other Ingredients

Coconut Oil

Adding coconut oil allows the active ingredients, the fat-soluble vitamins D3 and K2, to be more easily absorbed due to the long-chain fatty acids in the oil.

Beta-Carotene

Known as provitamin A since it is changed into vitamin A in the body, beta-carotene works as an antioxidant to maintain normal cellular function.

D alpha-tocopherol (Vitamin E)

The most absorbable form of vitamin E, d alpha-tocopherol, helps prevent oxidation.

Rosemary Extract

This extract provides a natural, safe means of maintaining freshness.

Supplement Facts	
Serving Size: 3 sprays (0.42 mL)	
Servings Per Container: About 71	
Amount Per Serving	%DV
Vitamin D3 (as Cholecalciferol)	
5,000 IU	1250%
Vitamin K2 (as Menaquinone-4&7)	
80 mcg	*
* Daily Value (DV) not established.
